SUBJECT.

Note on Census Operations in Central India.—

STATEMENTS.

FORM I—General Statement of area and population.

" III—Statement shewing the distribution of the population according to religion.

" IV—Statement shewing the relative proportions of the sexes and of the main religious divisions of the population.

" VII—Statement shewing the distribution of the Hindu and aboriginal population according to age and religion.

" " Statement shewing the distribution of the Jew population according to age and religion.

" " Statement shewing the distribution of the population whose religion is unspecified according to age and religion.

" " Statement shewing the distribution of the Mahomedan population according to age and religion.

" " Statement shewing the distribution of the Christian population according to age and religion.

" " Statement shewing the distribution of the Jain population according to age and religion.

" " Statement shewing the distribution of the Parsi population according to age and religion.

" " Statement shewing the distribution of the Sikh population according to age and religion.

" VIII—Statement shewing the distribution of the aboriginal population by tribes.

" " Statement shewing the distribution of the Hindu population by caste.

" X & XI—Statement shewing the general distribution of the population according to birth-place.

" XII—Statement shewing the distribution of the population according to occupation.

" XVIII—Statement shewing the number of villages and towns.

" XIX—Towns containing more than 5,000 inhabitants arranged according to population.

" XX—Statement of population for towns with more than 5,000 inhabitants arranged territorially.

SUPPLEMENTARY STATEMENTS.

FORM III A.—Statement shewing Christians by race and sect (Cantonments only).

" V—Statement shewing the distribution of the population with reference to marriage (Cantonments only).

" VI—Statement shewing the distribution of the population according to civil condition, age and religion (Cantonments only).

" IX—Statement shewing the distribution of the population by language (Cantonments only).

" XIII—Statement shewing the distribution of the population according to education (Cantonments only).

" XIV, XV, XVI and XVII—Statement shewing the number of persons of Unsound mind, Deaf and Mutes, Blind and Lepers (Cantonments only).

ERRATA.

CENSUS REPORT, CENTRAL INDIA 1881.

Page. 11 Para 16 for 87·23 females to 100 males, *read* 89·70 females to 100 males.

NOTE

ON

CENSUS OPERATIONS

IN

CENTRAL INDIA.

1. The census of 1881 was the first systematic attempt which has been made to enumerate the population of the many Native States, which form the Political charge of the Agent to the Governor General for Central India. The undertaking was one which necessarily presented many difficulties. The Central India States have no geographical homogeneity, and may be described as two irregular and detached tracts of territory, converging at the Cantonment of Jhansi, and stretching in an arc East and West across the middle of the continent of India. Ethnologically, they comprise many diverse elements, whilst in matters of administration and jurisdiction they are split up into 69 States, or semi-independent holdings, the intermixed nature of the former being only comprehensible by a careful study of the map. To exemplify the geographical confusion which exists, for instance, in Malwa, it may be noted that a straight line drawn from the Cantonment of Neemuch, to the capital of the Bhopal State, would pass through detached or isolated portions of the following States: Gwalior, Jaora, Gwalior, Jhallawar (Rajputana), Gwalior, Dewas, Narsinghgarh, Rajgarh, Gwalior and finally Bhopal. The administration of these and many other detached portions of territory, situated at a distance from any controlling authority, is necessarily weak and inefficient. It is not, therefore, a matter for surprise, that the enumeration in a number of the Native States of Malwa was an enterprise fraught with almost insurmountable difficulty, nor was inefficient administration the only difficulty met with in the late census. In the South West corner of the Agency, which is mostly inhabited by Bhils, the same trouble was met with as was experienced in the wilder Bhil inhabited portions of Rajputana, though in a milder degree. The Bhils were strongly apprehensive of the, to them, possibly evil results of enumeration, and, in deference to these alarms, it was necessary to substitute a day for a night census; and to arrange for an enumeration of the population through the headmen of villages. In the Eastern and detached portions of the Agency, the States of Bundelkhand and Baghelkhand, the population especially of the Baghelkhand Agency, which includes a considerable number of Gonds, Kols, and semi-independent Baghels, is almost as wild as that of the Bhil States. Rewah, for instance, with an area of about 10,000 square miles is perhaps the most backward State in India. Possessing no roads, or means of internal communication, it has only rarely been penetrated even by European officials, and the nobles and petty chiefs of the interior are as primitive and old fashioned as they are interesting. In neither Baghelkhand, excepting a general control by the Political Agent in charge of Rewah, Bundelkhand, nor indeed in any portion of Central India, except in a few of the smaller States under direct management, was any supervision by British officers possible. In Bundelkhand, the area of which is returned at 10,239·27 square miles, the Political Agent has charge of 30 States, the

majority of which are not sufficiently advanced for their Rulers to form any conception of the advantages to be derived from a correct census of their populations, and in the arrangements for the conduct of which the Political officer was able to do no more than issue instructions, which were, as a rule, imperfectly understood and often misapplied. In one case, the schedules for a small State were returned to the Political Agent blank, accompanied by loose pieces of paper, giving such information as had been collected, with the remark that no one there understood the filling up of the Statements, which were consequently returned blank for fear they might be spoiled. To any one with a knowledge of the manner in which the census is taken in a British district, the whole of the administrative staff being placed at the Collector's disposal with competent assistance from other officers, whose presence infuses energy and ensures accuracy in the preparation of the Schedules, the utter hopelessness of attempting to secure a correct, or even approximately correct census of Central India, where in the majority of cases the enumeration is viewed at best with apathetic indifference, and where British officers are unable to do more than issue general instructions, which will inevitably share the fate of all such instructions, unless vigorously supervised, must be clearly apparent.

2. The position which Central India has occupied, as regards the census, and a brief outline of the difficulties experienced have now been noticed, and sufficient has been said to make it clear that no accurate deductions can be drawn from, or statistics erected upon, the figures which the Statements contain. It is, in short, not safe to regard them otherwise than as a rough estimate of the people, and the facts connected with their existence. Possibly when the time occurs for taking another census, the introduction of improved communications, with a concomitant increased prosperity of the country, may have induced more advanced ideas of administration, and an ability to discern the numerous fiscal advantages to be gleaned from a correct record of all details affecting the population. Meanwhile, what we now have is not altogether useless ; many facts have been collected which are either of interest or importance, and the figures will serve as a foundation, though only an imperfect one, on which to rear a more carefully constructed fabric hereafter ; whilst for the Province as a whole, it is not unreasonable to suppose that inaccuracies, exaggerations, and diminutions may have, throughout the many States, in some measure corrected themselves, and brought out for the whole a more accurate total than the manner in, and the circumstances under, which the census was taken would justify our crediting.

3. In the few remarks it is necessary to make, it is proposed to follow the form which has been adhered to elsewhere. *Firstly,* to detail the action taken for the enumeration and to note all facts of interest regarding the enumeration likely to be of use as a guide hereafter, and *secondly,* to describe the final result of the census, following as far as possible the order of the prescribed Statement.

Census operations.—Preliminary.

4. On receiving copies of the Census Committee's report with accompaniments through the Government of India, the various Political officers were addressed with a view to ascertaining whether the required co-operation in the taking of the census could be relied upon from Native States. The answers received were generally satisfactory, and in 1878 the Government of India were informed of this, though it was pointed out at the same time that returns of the accuracy obtainable in British India could not be expected. In June 1880 the

following circular was addressed to all Political officers and the Indore Durbar. Circular A.

CIRCULAR No. A.

CENSUS OF 1881.

INSTRUCTIONS TO POLITICAL OFFICERS.

A general census of the population of British India is to take place early in February 1881. The exact date will be notified hereafter. The Native chiefs within this Agency have generally consented to their own States being included within the census operations, and the following suggestions will be of use in arranging for the requisite organization and action.

I. The work of enumeration should be effected, as far as possible, through existing Establishments, and without extra cost.

II. It will be advisable for census purposes, to divide each State into so many Districts, Subahs, Mahals or Talukas, and every District, into sub-divisions or Parganas. To superintend and assist the work of Enumerators, Supervisors should be nominated in the proportion of one Supervisor to every 10 or 12 Enumerators. The Supervisors will be subordinate to the head District authority, who will communicate directly with the Durbar or Political Agent. The 1st Assistant Agent Governor General will act as Deputy Superintendent of census operations for Central India.

III. The actual enumeration will be effected by the Enumerators. A house has been everywhere accepted as the unit of enumeration. It is defined as the homestead where members of a family live in commensality, and it comprises also the resident servants of such family. A block of not more than 100 houses should be put in charge of each Enumerator, who will be supplied on application with a book containing 110 Forms of the Schedule appended, printed in English, Persian, and Nagri characters.

IV. The Schedule contains 8 columns shewing respectively the number of each house-inmate, his or her name, sex, age, birthplace, occupation, caste and religion. In filling up this Form the following points should be carefully attended to :—

1. The writing should be clear and distinct. a separate page should be taken for each house, and a separate book for each Enumerator's block.

2. The Enumerators should commence as soon as possible a preliminary record of all the regular inmates of each house within their block. Persons absent on journeys should be excluded from this record, as also travellers and temporary guests.

3. The name of females need not be entered if any objection is made, but each should be represented by the figure 1 in the 1st column, and the word 'female' in column 3.

4. The approximate age of each person should always be entered by the Enumerator in the appropriate column.

V. After the completion of this preliminary record, the work of the Enumerators on the day of the census will be confined simply to checking and correcting the previous entries, erasing those of the family who are absent, and including such as have recently arrived. A fresh page or pages should be used for entering the names of people who may be lodging that day in serais, private houses, boats or other places within the Enumerator's block. This casual population will only be counted once, namely, on the actual day of the census. It is presumed that the Railway authorities will arrange for the enumeration of all those who may at the time of the census be within Railway limits.

VI. Great care should be taken to prevent the same people from being enumerated twice over. In the more considerable towns each house or building might be numbered with charcoal or chalk, or in some equally inexpensive fashion, and entries made beforehand in each Enumerator's List, of the numbers of all the houses within his block. Where the separate numbering is not feasible, each block should be specified and defined as clearly as possible.

VII. Special precautions will probably have to be taken in providing for the enumeration of the Bhil population. They are very sensitive on this point, and their houses should be dealt with under separate arrangements with their Naiks, Turwees or other recognized heads.

All these preliminary arrangements should be commenced as early as possible, and Indents should be sent into this office at once for the number of Form Books each State is likely to require.

VIII. The Agent Governor General fully recognizes the impracticability of securing statistics of the same extent, accuracy and elaboration as may be expected in British territory. A rough but synchronous enumeration is all that is required, and the Agent Governor General need not point out the large revenue and administrative advantage, the chiefs of Central India will derive from even approximately correct statistics of their population. He feels assured accordingly that they will lend Government their hearty co-operation, and strive their utmost to prevent any mistrust or misinterpretation of this important work from arising among their subjects.

Name of State, District, Subdivision (to be varied according to circumstances).

House No.

Serial number of each inmate.	Name.	Sex.	Age.	Religion.	Caste or Sect	Birthplace.	Occupation.

5. In October 1880, Mr. Elliott, the then Census Commissioner, visited Indore, and in personal communication with him it was decided to adopt two forms of Schedules for Central India; one of 8 columns for Native States, omitting the headings regarding marriage, education, infirmities and language, the other of 12 columns for Cantonments and Railways, giving the same details as were to be collected in British India. Enumerators' Schedules were supplied by Government to all Native States, but it was left to them to arrange for the work of enumeration, in which no interference was exercised. We have not at present complete information regarding the agency employed either in the preliminary or in the final enumeration, but both are believed to have been carried on partly by the officials of the States concerned, such as Putwaris, Zemindars, Kotwals, Police, &ca., and partly also by paid agency. In Cantonments and for Railways paid agency was utilized where necessary. The preliminary enumeration is said to have been made, as a rule, two or three weeks before the 17th February, and Political officers report that the census generally is believed to have been synchronous. This statement must, however, be accepted with some caution. In one of the largest of the Central India States Enumerators' Schedules were not received for several months after the census was supposed to have been taken, whilst in the wilder parts of Baghelkhand and Bundelkhand, there is no reason to suppose that Enumerators walked from house to house at night counting the people. For the Bhil States, as has already been mentioned, a day instead of a night enumeration was determined upon, as signs of proposed migration to avoid being counted were evident early in the year.

Tabulation and Compilation.

6. Considerable correspondence ensued subsequent to the census, regarding the facts and figures to be brought out in the Final Statements, which were only decided upon by the Census Commissioner towards the end of May; after which the Working Registers and Village Tables were printed, and tabulation commenced in July. The following census Forms were determined upon :—

Final Form I.

General Statement of Area and Population.

Final Form III.

Distribution of the Population according to Religion.

Final Form III A.

Subsidiary Form shewing Christians by Race and Sect.—(*Cantonments only*).

Final Form IV.

Statement shewing the Relative Proportions of the Sexes and of the Main Religious Divisions of the Population.

Final Form V.

Distribution of the Population with reference to Marriage.—(*Cantonments only*).

Final Form VI.

Distribution of the Population according to Civil Condition, Age and Religion.—(*Cantonments only*).

Final Form VII.

Distribution of the Population according to Age and Religion.

Final Form VIII.

Castes.

Final Form IX.

Distribution of the Population by Language.—(*Cantonments only*).

Final Forms X and XI.

Statement shewing the General Distribution of the Population according to Birthplace.

Final Form XII.

Statement shewing the Distribution of the Population according to Occupation.

Final Form XIII.

Distribution of the Population according to Education.

Final Forms XIV, XV, XVI, and XVII.

Infirmities.—(*Cantonments only*).

Final Form XVIII.

Villages and Towns.

Final Form XIX.

Towns containing more than 5,000 Inhabitants arranged according to Population.

Final Form XX.

Statement of Population for Towns with more than 5,000 Inhabitants arranged territorially,—

and an explanatory memo., which is given below, was issued by Mr. Alexander, Principal of the Indore Residency College, who had shortly before been appointed Deputy Superintendent of Census operations :—

"The Final Forms will embrace some large area, such as a State, and must be filled up from information recorded in the Village Tables.

"The Village Tables will embrace some smaller area, such as a Pargana or equivalent territorial division, and must be filled up from the information recorded in the Working Registers.

"It is presumed that the Enumerators' Schedules have been sorted and arranged according to blocks. Each block requires one set of Working Registers. After each office has determined whether a Pargana adequately re-

presents the territorial division herein indicated, and if not, what division should be adopted as corresponding to a Pargana, the first business will be to collect together all the Schedules belonging to particular Parganas or equivalent territorial divisions and to prevent the Schedules of one Pargana getting mixed with those of another.

"As each book is given out to be abstracted from, a set of Working Registers must be given with it.

"The method of tabulation should be on the reading aloud system. Each working party for abstracting from the Schedules will consist of one reader and two tabulators.

"On receiving a book and set of Working Registers, each party will set to work in the following manner:

"The Schedule will be given to the reader, Working Registers I. and III. to one tabulator, Working Registers II. and IV. to the other tabulator.

"The reader will commence to read as follows, for instance, 'male,' 'middle aged,' 'Hindu,' 'Rajput,' 'Indore,' 'carpenter.'

"Practically it will probably be found simpler for the reader to read the particulars of all the males in a block first, and then to commence again and read those of the females.

"The first tabulator will make a mark opposite 'middle aged' and under 'Hindu males' in Working Register I., and opposite "Rajput" in the column of males in Register III.

"The second tabulator will make a mark opposite the country in which the birthplace is situated, in this case, say, opposite 'the State in which census is being taken,' in the column for males, and another mark opposite 'carpenter' in Working Register IV.

"It will occasionally occur that an occcupation or low caste will not appear in the Working Registers, under the special name under which it occurs in the Schedules.

"In this case if the occupation or low caste is known to be identical with an occupation or caste recorded in the Working Register, it may of course be entered under that heading. If, on the other hand, the occupation or low caste has no equivalent, and is not one of very rare occurrence, a separate heading must be written for it on the Working Register, care being shown to place it in the proper class. In the case of very rare occupations or castes occurring they may be put under the heading 'Miscellaneous,' provided they are properly classified; for it must not be forgotten that each class of occupations has a column headed 'Miscellaneous.' But great care must be taken that the total number of marks in any one Working Register under the heading 'Miscellaneous,' shall not exceed 1 % of the total number registered. Should such ever be found to be the case on completion of a Register, the Schedule must be worked over again or the 'Miscellaneous' heading split up into its component parts.

It will be easily understood how a numerically large miscellaneous total would to a great extent nullify the useful effect of the tabulation.

"Each set of Working Registers represents a block. If two or three blocks constitute a village, the total of each block must be entered in the Village Tables in red ink and then added together, and the village totals should be entered in black ink. Should a block contain two or more villages, a separate set of Working Registers must be used for each village.

"Village Table 1. can be filled up directly from Working Register I.

"Village Table 1½ from the last 3 columns of Working Register I.

"A separate Village Table 1. will be required for each Religion in the blocks of a Pargana and a village.

"Table 1½ to show 'ages' of all Religions or total population of each Pargana.

"Village Table 2 is filled in from Working Register I., but some totalling is necessary for the last columns.

"Village Table 3 can be filled in from Working Register I. bottom totals.

"Village Table 4 can be filled in directly from the totals of Working Register III.

"Village Tables 5 and 5½ can be filled in from Working Register II. directly.

"Village Tables 6 and 6½ are filled in directly from Working Register IV. Each Pargana will require two separate sets of Village Tables 6 and 6½, one for towns and one for villages.

"As very much more information has to be recorded from the 12 column Schedules, another set of Working Registers and Village Tables will be required for them. The Working Registers and Village Tables herein referred to can only be used to abstract information from the 8 column Schedules.

"The compilation of the Final Forms need not be *explained* at present."

7. It was decided that all tabulation work should be performed under the supervision of Political Agents for the States within their charges, the final compilation being carried on at Indore under Mr. Alexander's personal supervision. He was unfortunately obliged to leave for England on medical certificate before the Final Forms were completed, and the work was thereby much retarded. The cost of these measures was borne by the Imperial Government, except in the cases of Charkhari and the Baghelkhand Agencies where payment was not asked for. The work of tabulating and compiling was, it is believed, carefully carried out; the labour was, however, materially increased by the existence of two different forms of Schedules; and it is doubtful whether the supervision exercised either in Cantonments or on Railways was sufficiently thorough, or the object to be gained by insisting on additional information from these localities of sufficient value, to justify the inconvenience which a dual set of Working Registers and other Statements created. The defects of enumeration or other salient facts noticed in abstracting the contents of the Enumerators' Schedules can be more

profitably noticed in the further remarks on the Final Statements. A Statement is given below shewing the details of the cost of the census in Central India, separating that portion which was borne by the Imperial Government, from the details of expenditure given as affecting Native States.

	Expenditure borne by Imperial Government.	Expenditure borne by Native States.	Expenditure borne by Local Funds.	TOTAL.
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Enumeration	5 8 0	34652-2-2	237 0 3	34874-10-5
Tabulation and Compilation ...	~~13,719 0 0~~ 13537-4-11	.....	.....	 39121-8-10
Printing Charges, Paper, Railway Charges &c.	5,166 9 7	.....	.....	5166-9-7
Total... ...	~~18,891 0 7~~ 18709-6-6	 60216-6-1	237 0 3	 79162-12-10

8. Before quitting this portion of the subject, it may not be unprofitable to note that a census of the large number of Native States which the Central India Agency contains, would have had a greater chance of being a correct record of many interesting details about a population, regarding which we know very little, had a special officer been appointed to supervise. As it was, work of an arduous nature was thrown on the Political Staff at Indore, and though every effort was made to carry out the wishes of Government, it was not possible to do more than issue general instructions to Political officers at a distance from Head Quarters, in the execution of which no supervision was possible.

General Statement of Area and Population.

9. This statement forms the ground-work of all the information that has been collected. Unfortunately the separate areas of some important States, one indeed, the largest in Central India, cannot be ascertained; and it is impracticable therefore to frame any even approximate detailed statistics concerning the density of the population. We are dependent for our figures connected with areas on the Topographical Survey Department; and the classification adopted, notably for Gwalior and the twelve States which head the list of Statement I., *i. e.*, for a total area of 29,066·08 square miles,—a classification which is neither geographically nor politically correct; as well as that for many other States improperly grouped together, renders any calculation, founded on the exact area of each, quite impracticable. For the total of Central India the population is given at 9,261,907 souls, which, distributed over an area of 75,229·64 square miles, gives a density of 123·12 persons per square mile, which may be accepted as approximately correct.

10. As has been already remarked, no previous census of the population of Central India has been taken. It is useless, therefore, to attempt any speculation as to decrease, increase, or movements of the population. It

may, however, safely be said that it has, in Malwa especially, a tendency to increase. Famine is here unknown, the soil is rich and productive, and even a temporary scarcity in Rajputana at once produces a long train of emigrants from less favoured States in that Agency, all pressing forward to the opportunities which offer themselves for an agricultural existence in Malwa. For the States of Gwalior and those under the Bundelkhand and Baghelkhand Agencies, it is not perhaps safe to hazard any conjectures; but there is no reason to believe that there has been any decrease in the population. In a census taken under the conditions already noted, many inequalities and apparent inaccuracies may, without difficulty, be detected in a close examination of individual entries. For instance, it is not easy to understand how in the Pindara Jaghir which consists of 44 villages and no towns, the density per square mile can possibly amount to 887·78; or how the average number of persons in each house comes to 24·66; but it is fruitless to attempt to do more than to notice the outcome of these statements in the bulk, and either the conclusion they justify, or the features, normal or abnormal, which they present.

Religion.

11. As is naturally to be expected, the population is almost entirely Hindu; 94 per cent. are recorded as Hindus, and 5 per cent. only as Mahomedans; the remaining 1 per cent. is distributed amongst Jains, Parsis, Christians, Sikhs and Jews. It is a singular fact, peculiar perhaps to a tract of country which has been the scene of much predatory strife and bloodshed, and the theatre of operations by powerful invaders, that the Rulers of the most important States are completely alien in race to the majority of the people over whom they rule. Similarly in the Mahomedan States of Bhopal and Jaora there is an overwhelming preponderance of Hindus, the Mahomedan element being only 8 and 11 per cent. respectively of the total population in these two States. The same disparity as regards race is noticeable in the Mahratta States.

12. Next in numerical importance to the Hindus and Mahomedans are the Jains, of whom there are 26,162 in Malwa and Nimar, and 23,662 in the remainder of Central India. Rutlam, Bhopal, Jaora, Dhar and Jhabua appear to be the Head Quarters, in this part of Central India, of the Jain community; but they are also found in large numbers in Gwalior (9,982), Urchha (7,233) and Bijawar (2,506). The Jain religion is interesting in the fact that its adherents, by virtue of their wealth and commercial position, gain an inordinate ascendancy over the action of their fellow towns-people, over whom they exercise much influence in matters relating to animal food, washing clothes, and other occupations in which there is any danger to life, insect or animal; and instances are not unknown of their depriving a whole community, not only of animal food, but also of the luxury of clean clothes during periods sacred to their special faith. It will be interesting, should a further census be taken, to note whether this religion secures further adherents; for it is by no means exclusive, and it is open for any Hindu of a certain status to become a Jain.

13. Of Parsis, there are very few found in Central India, the total number being given as 916, who are resident mostly as shopkeepers or clerks in offices in Cantonments, and in the Indore Residency limits.

14. Christians number 7,065; of these 6,507 belong to Cantonments. Amongst Native States, Bhopal contains the greatest number of Christians (155).

This body represents the colony of Roman Catholics, which has sprung up around the family of, and exists on the property of, the once celebrated Minister of Bhopal, Shahzad Masseeh.

15. The number of aboriginals (891,424) is, as was to be expected, considerable : they will be alluded to presently more in detail.

Population by Sexes.

16. The population consists of 4,882,823 males and 4,379,084 females, the former, as is usual in most Indian Provinces, exceeding the latter by 503,739, or 10·4 per cent. There are thus 87·23 females to 100 males, which, though a low average, is not a feature for the existence of which any off-hand explanation can be given. Various surmises might be put forward to account for this disparity ; but it cannot be expected that the same causes have operated over the whole of Central India. Again, an accurate enumeration, which in the case of females is admittedly a difficult process even in British India, has probably not been made, and various causes may have tended to either unduly swell or diminish the numbers in any one particular State. The Statement regarding Christians by race and sect, and details concerning marriage have only been collected for Cantonments, and are not of sufficient interest to call for any special remarks.

Population according to Age and Religion.

17. Five periods of age were adopted for the enumeration in Native States, viz. :—infants, 1 to 3 years; children, 4 to 15 years; youths, 16 to 30 years; adults, 31 to 50 years ; old, above 51 years (men and women). It is a matter of extreme difficulty to invent any classification which, while being intelligible to uneducated natives, shall also effect a correct registration of ages. The periods adopted were probably as good as any other under the circumstances, but they led, it is believed to abnormal registration under the terms *children* (larká, larki) and *youth* (jawán). Most natives who are not either old and crippled prefer to be recorded as *jawán*, whilst a native boy may have reached the age at which he, in our society, would be considered a man, and still be called a "larká" by his parents. Thus we find that out of the whole population of Central India 6,102,298 have been recorded under these two denominations, viz. : 3,591,139 as youths, 2,511,159 as children. The number of infants (from 1 to 3 years) is recorded at 869,890, or only 9 per cent.; the 2nd, 3rd, 4th and 5th periods of age work out to 27, 40, 15 and 9 per cent. respectively. Infant males and females are almost exactly equal. Male children are 29 and females 25 per cent. Male youths and female youths number 39 and 38 per cent. respectively. Male adults 15, female adults 16, old males 8, old females 12 per cent. The age periods, as connected with the various religions, exhibit the following particulars :—

(*a.*) Hindu male infants are slightly more numerous than Hindu female infants ; whereas among the Jains and Mahomedans female infants preponderate.

(*b.*) As regards children, youths and adults, the male sex considerably outnumbers the female sex.

(*c.*) Old women are presumably more long lived among Hindus, Mahomedans and Jains, than men.

The particulars under (*a*) are, if correct, of some interest as proving that female infanticide is not systematically practised in Central India. The remaining information appears to correspond generally with what has been noticed in other parts of India, for which more accurate records are available.

Aboriginals.

18. These, as constituting 9 per cent. of the population, are of considerable interest in Central India. The *Gonds*, who are found chiefly in the States bordering on Gondvana, number 413,602. Next in importance come the *Bhils* who are returned at 217,022. They inhabit the States on the south-west corner of Central India, and are not found elsewhere. Formerly a tribe which lived by plunder, and without any settled occupation, they are now gradually settling down to peaceful agriculture, though still liable, as has already been shown, to alarms, and timid of any invasions of their rights. A few of them have in former times intermarried with Rajputs, from whence has sprung the sect of "Bhilalas," who, though well known in Malwa, have not been separately enumerated.

19. The *Kols* are the aborigines of the hilly country of Chota Nagpur, Mirzapur and Rewah, and except in Panna, are not found elsewhere in Central India. Amongst them the wife enjoys the privilege of eating with her husband; and they are all said to be passionately fond of dancing, which they cultivate as an accomplishment. Like many wild tribes, they are very superstitious, and have a peculiar dread of witches. A form of marriage by conquest has a practical existence among them. The bridegroom waylays the young lady, on whom he has set his affections, and forcibly carries her off to his house. He is speedily followed by her relatives, who are, however, usually found willing to be pacified by presents of cows, goats, &c.

20. The *Moghias* number 5,091. They correspond to the Banrias in Rajputana, and are a predatory race, for whose reclamation a special officer has been appointed by Government.

Castes.

21. For the purpose of simplicity it was decided to divide all Hindus, including aboriginals, into two main divisions: one comprising Brahmans and Rajputs, which were designated high castes; the second containing Ahirs, Balais, Banias, Chamars, Gujars, Kachhis, and Kunbis; another column has also been added in Statement VIII. for *other Castes under 100,000 in number.*

The following Statement gives, in an abridged form, information regarding castes in Agencies, and some of the States in Central India.

	Brahmans		Rajputs.		Castes above 100,000 in Number.		Other Castes under 100,000 in number.		Aboriginal Tribes.		TOTAL.

22. Omitting for the moment Chamars, who number over 10 lakhs, we find that Brahmins, amongst whom are included Guzerati and Maharashtra Brahmins, largely predominate over any other caste in Central India, excepting Rajputs, the numbers for both being 9,61,993 and 8,03,366 respectively, or 11 per cent. and 9 per cent. of the total population; excepting Chamars, no other caste exceeds 4 per cent. We have no detailed information regarding the various Gots or sub-divisions of the Brahmins, but it may be safely said that they are mostly residents of the larger towns, a number being in the service of Native States, for which their natural ability well fits them. They are found in large numbers in Rewah, a remarkably priest-ridden State.

23. It is a matter for regret that it was not possible to collect any information regarding the Gots of Rajputs. It is believed, however, that the most numerous are the Baghels and the Bundelas. The former are of the tribe, to which the ruling princes of Rewah, Sohawal and Koti belong. The principal Bundela chiefs are Urchha, Dattia, Panna, Bijawar, Charkhari, Ajaigarh and some other less important, though powerful families in Bundelkhand, of this sect. The acknowledged head of the Bundela clan is His Highness the Maharajah of Urchha.

24. Moving westward from Bundelkhand, Khichi and Umat Rajputs are found in some numbers; and in the southern portions of the Agency, and generally throughout Malwa, various clans exist, the chief among which are the Rathors, of which are the chiefs of Rutlam, Sailana and Sitamau, who have all a common ancestry and claim descent from the Jodhpur stock. There are also a few Parihars, Kachwahas and Sisodias.

25. Socially perhaps the most important clan in Malwa are the Puars of Dhar and Dewas,—Senior and Junior. Though originally Rajputs, they have, by intermarriage with the Mahrattas, impaired their pure descent, and are now to all intents and purposes Mahrattas Among the villagers of Malwa, a number of Puars Rajputs are, however, found who have still retained their characteristics as true Rajputs, and do not intermarry with the Mahrattas.

26. Numerically, though not socially, of much importance, the Chamars, who number 10,76,949, now claim notice. They are, next to the Mehters, the lowest caste in Central India. They are workers in leather, and eat the flesh of the dead animals, whose bodies they strip for their skins. No village is without its Chamar, but they are, as a body, considered so unclean, that they are rarely allowed to live within the precincts of the inhabited portion, and to touch them even is pollution. The Gujars, numbering 3,37,466, are a very important section of the community, and are found chiefly in the Gwalior territory; though from the number of this sect, shown in the Gwalior returns, it is possible that Ahirs have been included amongst Gujars. The latter are a cultivating class, and are usually considered desirable acquisitions to a village.

Distribution of Population by Language.

27. No information has been collected regarding the languages spoken in Native States. It may be noted, however, that even in a Mahratta State Marathi is only spoken in the towns, the agricultural population not understanding it. It is, of course, the Court language at Indore and Gwalior, and also at the capitals of the two Dewas and Dhar. For the remaining Hindu States

the language usually employed, as well as that mostly understood by the people, is Hindi and Rangri.

Birthplace of the Population.

28. The following table gives, in an abridged form, information regarding birthplaces :—

Where born.	Males.	Per cent.	Females.	Per cent.	Total.	Per cent.
Within the Province	4,640,987	95	4,137,077	94	8,778,064	95
In other Provinces within India	236,553	5	241,198	6	477,751	5
Total ...	4,877,540		4,378,275		9,255,815	
Outside India, but in Asia	510		137		647	
Europe	4,462		669		5,131	
Africa	1		1		2	
America	2		2		4	
Unspecified	308				308	
Grand Total ...	4,882,823		4,379,084		9,261,907	

95 per cent. of those returned as having been born in India, were born within the Province, and only 5 per cent. in other parts of the Continent. Very few foreigners have been entered in the Schedules. It is, however, doubtful whether these figures are correct. In Gwalior, for instance, over 2,800,000 persons, or 95 per cent. of the total population, are shown as having been born in the Gwalior State.

Occupation.

29. The Census Commissioner considered it essential that as much detail as possible should be given regarding the occupation of the people, but the Schedules were found to be so faulty in this and many other particulars, that it was determined merely to describe the occupations for the four geographical divisions which had been adopted for birthplace. Final Form XII. contains such information as it was possible to prepare, but the details given appear to be of doubtful value, as being founded on almost wholly unreliable figures. In the Gwalior Schedules for instance, only 11 occupations have been given, and those in such general terms as to be absolutely useless. The remaining Statements do not appear to call for any detailed remarks.

D. ROBERTSON,
First Assistant Agent Governor General.

THE RESIDENCY, INDORE,
14th November, 1882.
